Business Analysis Case Study

Video Streaming Platform

Nhu Thanh Hoang To

March 15, 2026

This project demonstrates the business analysis process for designing a video streaming platform, including requirement analysis, system design, and system architecture modeling.

1 Project Overview

Project Summary

The objective of this project is to analyze user needs and design a video streaming platform that allows users to easily discover, search, and manage movies through a clean and intuitive interface.

1.1 Background

The online video streaming industry has experienced significant growth. However, users often struggle to discover relevant content due to complex navigation and overwhelming movie libraries.

1.2 Business Problem

Users encounter several challenges when using streaming platforms:

- Difficulty discovering relevant movies
- Time-consuming navigation through large content libraries
- Poor content discovery experience

1.3 Project Goal

Design a platform that allows users to:

- Browse and search movies easily
- View detailed movie information
- Watch trailers
- Save favorite movies

2 Stakeholder Analysis

Stakeholder	Role	Interest
Users	Watch movies	Easy navigation and movie discovery
Admin	Manage movie content	Maintain and update movie database
Product Owner	Product direction	Improve user engagement and growth
Development Team	System implementation	Deliver technical solution

3 User Personas

3.1 Persona 1

Minh Nguyen

Age: 21
Occupation: University Student
Goals

- Quickly find movies to watch
- Discover trending films

Frustrations

- Too many movie options
- Hard to find interesting content

3.2 Persona 2

Anna Tran

Age: 28
Occupation: Office Worker
Goals

- Watch movies after work
- Save movies to watch later

Frustrations

- Limited time to browse movies
- Hard to track favorite movies

4 User Stories

- As a user, I want to search movies by name so that I can quickly find films.
- As a user, I want to view movie details so that I can decide whether to watch the movie.
- As a user, I want to watch trailers so that I understand the movie before watching.
- As a user, I want to save movies to favorites so that I can watch them later.
- As an admin, I want to add new movies so that the platform always has updated content.

5 Functional Requirements

ID	Requirement
FR1	Users can register using email and password
FR2	Users can log in to the system
FR3	Users can browse movies by category
FR4	Users can search movies by title
FR5	Users can view movie details including description, genre, cast, and trailer
FR6	Users can add movies to favorites
FR7	Users can remove movies from favorites

6 System Design

6.1 Use Case Diagram

7 Conclusion

This project demonstrates a business analysis approach for designing a video streaming platform. The analysis includes requirement gathering, stakeholder analysis, user personas, system diagrams, and system architecture design.

The proposed solution improves user experience by simplifying movie discovery and enabling users to easily search, explore, and manage their favorite movies.
